

# INTERIOR DESIGN DECORATIONS OF THE MACEDONIAN TRADITIONAL HOUSE

Aneta Micevska, Vladimir Karanakov

## ABSTRACT

*It is necessary to proceed from one's heritage, in order to accept the advances of modern architecture [1]. At present it is difficult to talk about the Macedonian folk house because of a significant lack of data, as well as because our traditional habitats are rarely saved in their original form. Therefore, this research article deals with the education for the traditional style design of the Macedonian traditional interiors, to support and improve the sector of vernacular architecture. Its goal is to present the authentic architectural aesthetics in the spatial plastic of our old houses.*

*Results: Using the analysis of the Macedonian traditional interior spaces, their interior processing and equipment are shown, as well as the symbols and semantics of their decorations and ornaments. This document gives an overview of the local ethnic characteristics of the domestic interior architecture, which are incurred as a result of centuries of continuous folklore creativity and tradition.*
